PREFACE

"Biological and Health Effects of Extremely Low Frequency Fields: a List of Eastern European Literature" was originally prepared at the request of a tripartite Canadian working group. It has been published as a service to others interested in this area.

The list of references was compiled from in-house sources and from references contributed by Canadian and foreign organizations and individuals.

Publications on the beneficial effects of extremely low frequency fields were not included, except for the papers which dealt with the possible mechanism(s) of the observed biological effects.

The citations have not been verified by comparison with the original publication. The names of most journals were verified against the Canada Institute for Scientific and Technical Information's "Union List of Scientific Serials Available in Canadian Libraries" (11th edition). Where possible the country and the city of publication were included. The original language of each article is noted where available.

Some Soviet journals have equivalent English journal translations. English translations of the Soviet literature were identified for JPRS translations.

The US Joint Publications Research Service (JPRS) translates selected Soviet scientific literature into English. Material identified by a JPRS number is available from the following series:

1. Translation on USSR Science and Technology, Biomedical and Behavioral Sciences, Effects of Nonionizing Electromagnetic Radiation

2. USSR Report, Life Sciences, Effects of Nonionizing Electromagnetic Radiation

Copies of the JPRS translations are available from:

National Technical Information Service (NTIS)
United States Department of Commerce
5285 Port Royal Road
Springfield Virginia
USA 22161
(703) 487-4650

Transliterations of Slavic Cyrillic characters into the Roman alphabet was done using the ANSI Standard Z39.24-1976 as a guide.

Although the present list is extensive, it is by no means comprehensive. Additional papers and citations can be found in the following documents:

1. Proceedings of the US-USSR workshops on physical factors : microwaves and low frequency fields. A series of workshops published by the US National Institute of Environmental Health Sciences, Research Triangle Park, North Carolina, USA and the A.N. Marzeev Scientific Research Institute of General and Communal Hygiene, Kiev, USSR.

2. Proceedings of US-USSR workshop on nervous system effects of electromagnetic waves : volume 1 : US and USSR literature overviews. Research Triangle Park, N.C. : National Institute of Environmental Health Sciences, 1984

3. Biological effects of high-voltage electric fields : an update : volume 2 : bibliography. Prepared by the Electric Power Research Institute, Palo Alto, California, USA, 1979

4. Dubrov, A.P. The geomagnetic field and life : geomagnetobiology. New York : Plenum Press, 1978

5. Magnetic fields in biology, medicine and agriculture. Rost -on-Don, USSR, 1985. (in Russian)

6. Biological effects of nonionizing electromagnetic radiation : a digest of current literature. Arlington, V.A. : Office of Naval Research, 1976-

7. Transmission/distribution health & safety report. Minneapolis : Interdisciplinary Environmental Associates, 1983-
